We have approximately 40x100 ft area designated for general physics labs and a stockroom. Each of four lab room has a capacity for 24 students. Lab tables have access to pressurized air source, dc/ac electric panel and ethernet backbone connection. Over 500 students/semester go through five different introductory physics labs (three of them are two-semester sequences) and an astronomy course with lab. The third semester general physics (modern physics) is taught in another lab located on the second floor, adjacent to optics/electronics lab.
